

# INK ADDICTION

TATTOO & PIERCING STUDIO

## CARING FOR YOUR NEW PIERCING

- Adults will only need saline solution and alcohol free mouthwash.
- Minors will also require liquid anti-bacterial / anti-microbial soap.

## HEALING PROCESS

- For the next two weeks you will need to rinse your piercing 3-4 times a day with saline solution, for about 30 seconds each time. (squirt or spray saline works best as you will not have to touch your piercing while cleaning).
- Minors will need to thoroughly wash their piercing (using clean hands) with liquid anti bacterial soap once they get home from school, sports or other activities.

After eating or drinking you will need to rinse the inside of your mouth with bottled spring or distilled water (no purified, no tap water).

- About 3-4 times a day you will need to rinse with alcohol free mouth wash, do not over use mouthwash, this will cause damage to your tongue and taste buds. If the mouth wash still burns, you can dilute it half with bottled spring or distilled water.
- Avoid eating anything spicy or acidic for the first week of your new piercing, this may cause the piercing to burn or be painful, and possibly swell more.
- Do not twist, turn, rotate or pull the jewelry through the hole at any time!!! (if the jewelry become stuck, that is your body sealing itself off from infection, your skin cannot grow into metal).
- For the next two weeks avoid: beach, ocean, jacuzzi, hot tubs, pools or lakes. (salt water pools are an exception).
- Avoid playing with your piercing, the less you touch it the better it will heal!!!! Playing with your jewelry may cause keloids or hypertrophic scarring!!!.
- Avoid changing the jewelry for at least the first month (avoid silver and sterling silver).
- **Do not use** alcohol or hydrogen peroxide under any circumstances!!!
- If you think your piercing is infected, **do not remove** your jewelry and return to your piercer!!! Removing your jewelry may cause the infection to be sealed inside and spread.

# INK ADDICTION

TATTOO & PIERCING STUDIO

\* Redness, itchyiness, seepage, crusties, swelling, minor pain, or pccasional bleeding are all part of the healing process, these do not signify infection!!!

- Everyone experineces and the way they heal completely different. You will not heal the same way as your frineds, family members, or even a twin.
- Always consult your piercer first with any questions or concerns.
